Scenario Overview:

Imagine you're tasked with developing a comprehensive task management application called "Legend Task Manager." This application aims to streamline task organisation for individuals and teams by providing a user-friendly interface and robust backend functionality.

As part of the interview test, you'll be responsible for:

- Designing and implementing the front-end interface using ReactJS or NextJS.
- Developing RESTful APIs using NodeJS and ExpressJS to handle user authentication and task management.
- Design appropriate database schemas to maintain user profiles and task details in line with the required functionality.
- Integrating the front-end and back-end components to create a seamless user experience.
- Ensuring that the application follows best practices regarding security, performance, and user experience.

You aim to demonstrate your proficiency in front-end and back-end development by building a functional and efficient task management application that meets the specified requirements.
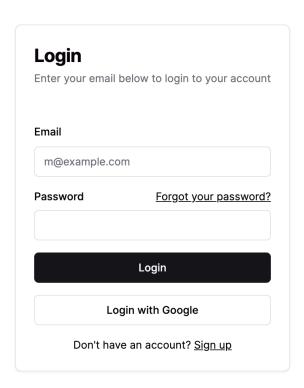

Bonus:

- Add notifications where necessary.
- Export tasks to PDF.
